BACKUP SOLUTION

BACKGROUND

In business landscape, unpredictable network downtime is a sobering reality. This downtime compromises business continuity and employee productivity, ultimately impacting your bottom line.

YahClick together with service partners has developed a robust backup solution: YahClick Backup Solution.

This innovative solution ensures connectivity interruptions are a thing of the past, enabling you to have limitless opportunities when you're always connected. This is true whether it be for your businesses or homes, where a stable, dependable internet backup connection and high availability uptime are required.

Satellite connectivity is often used as a backup link for terrestrial connection that acts as primary. Seamless failover from the primary terrestrial link to the backup YahClick satellite link is extremely important for the continuous operation of an organization and for users. YahClick Backup Solution provides a seamless failover solution.

WHAT IS YAHCLICK BACKUP SOLUTIONS ?

The YahClick backup solution provides you with seamless connectivity with zero interruptions. This makes your internet works efficiently and ensures peace of mind for you and your family, as well as protects your business against the risk of missing any great opportunity due to internet downtime.

The communication link switches over from a terrestrial connection to a YahClick Satellite link as a backup, protecting you from both day-to-day disruptions and terrestrial telecommunications and outages due to load shedding, roadworks, or natural disasters, etc. This ensures that you stay connected with the appropriate UPS.

HOW DOES IT WORK?

Should your primary internet link (main internet connection) go down, YahClick Backup will route all traffic seamlessly over the backup connection (YahClick Satellite Network), mitigating risk until service is restored on the primary network.

YahClick Backup Solution provides and installs a Peplink Balance 20 d**ual WAN** router where **WAN 1** is configured as the primary internet connection, and **WAN 2** is configured as the **backup** internet connection.

In this configuration, when the primary internet fails, the secondary internet will become active. Once the primary internet returns, the unit will switch back to it.

WHO CAN BENEFIT?

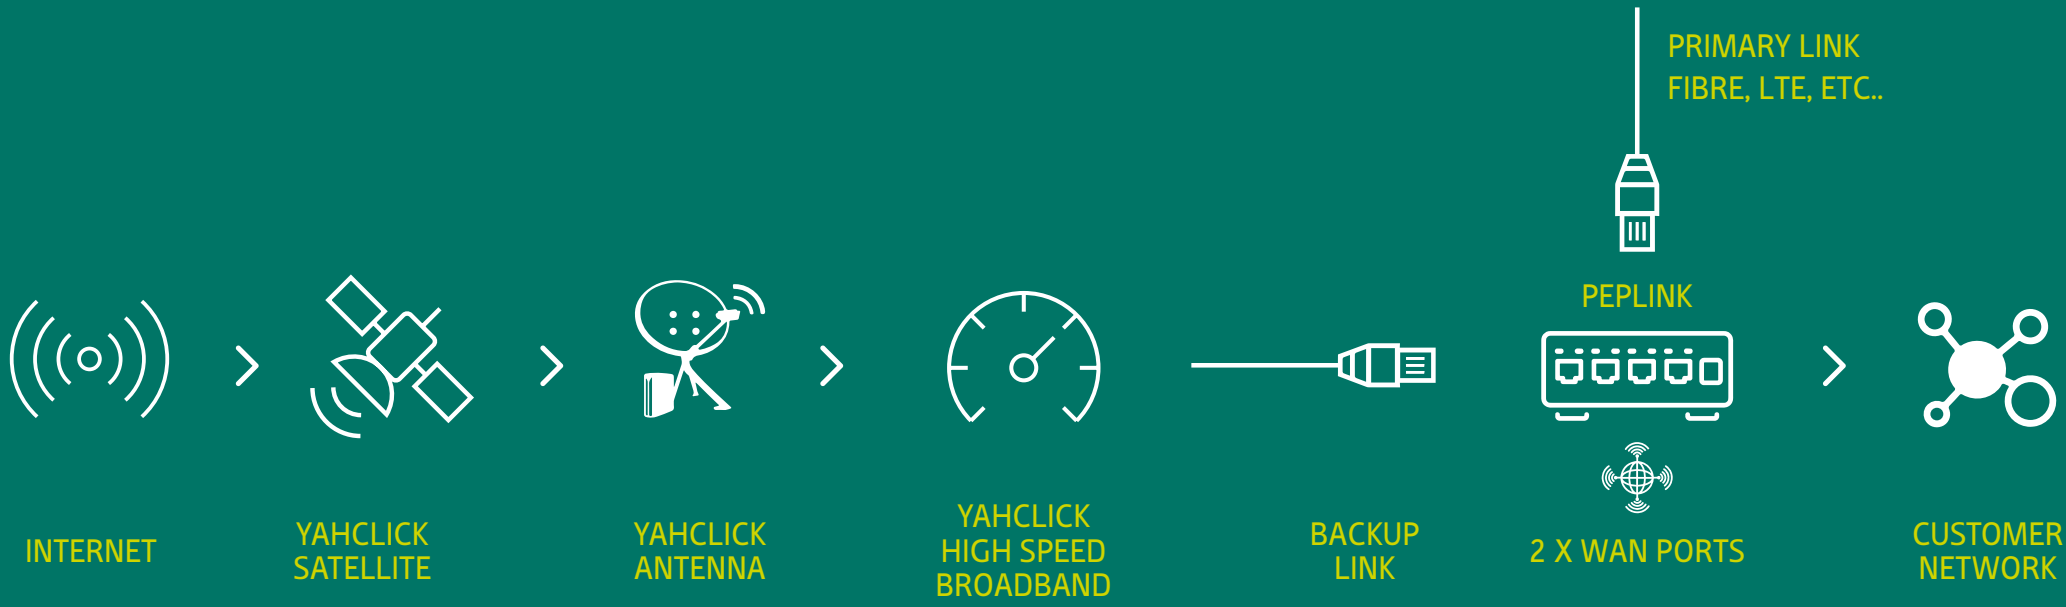
- Businesses and homes that require a stable, dependable internet backup connection.
- Enterprise customers that need seamless connectivity and no downtime.
- Remote project sites that require 100% uptime.
- Critical communications sites that cannot tolerate any outage in their connectivity.

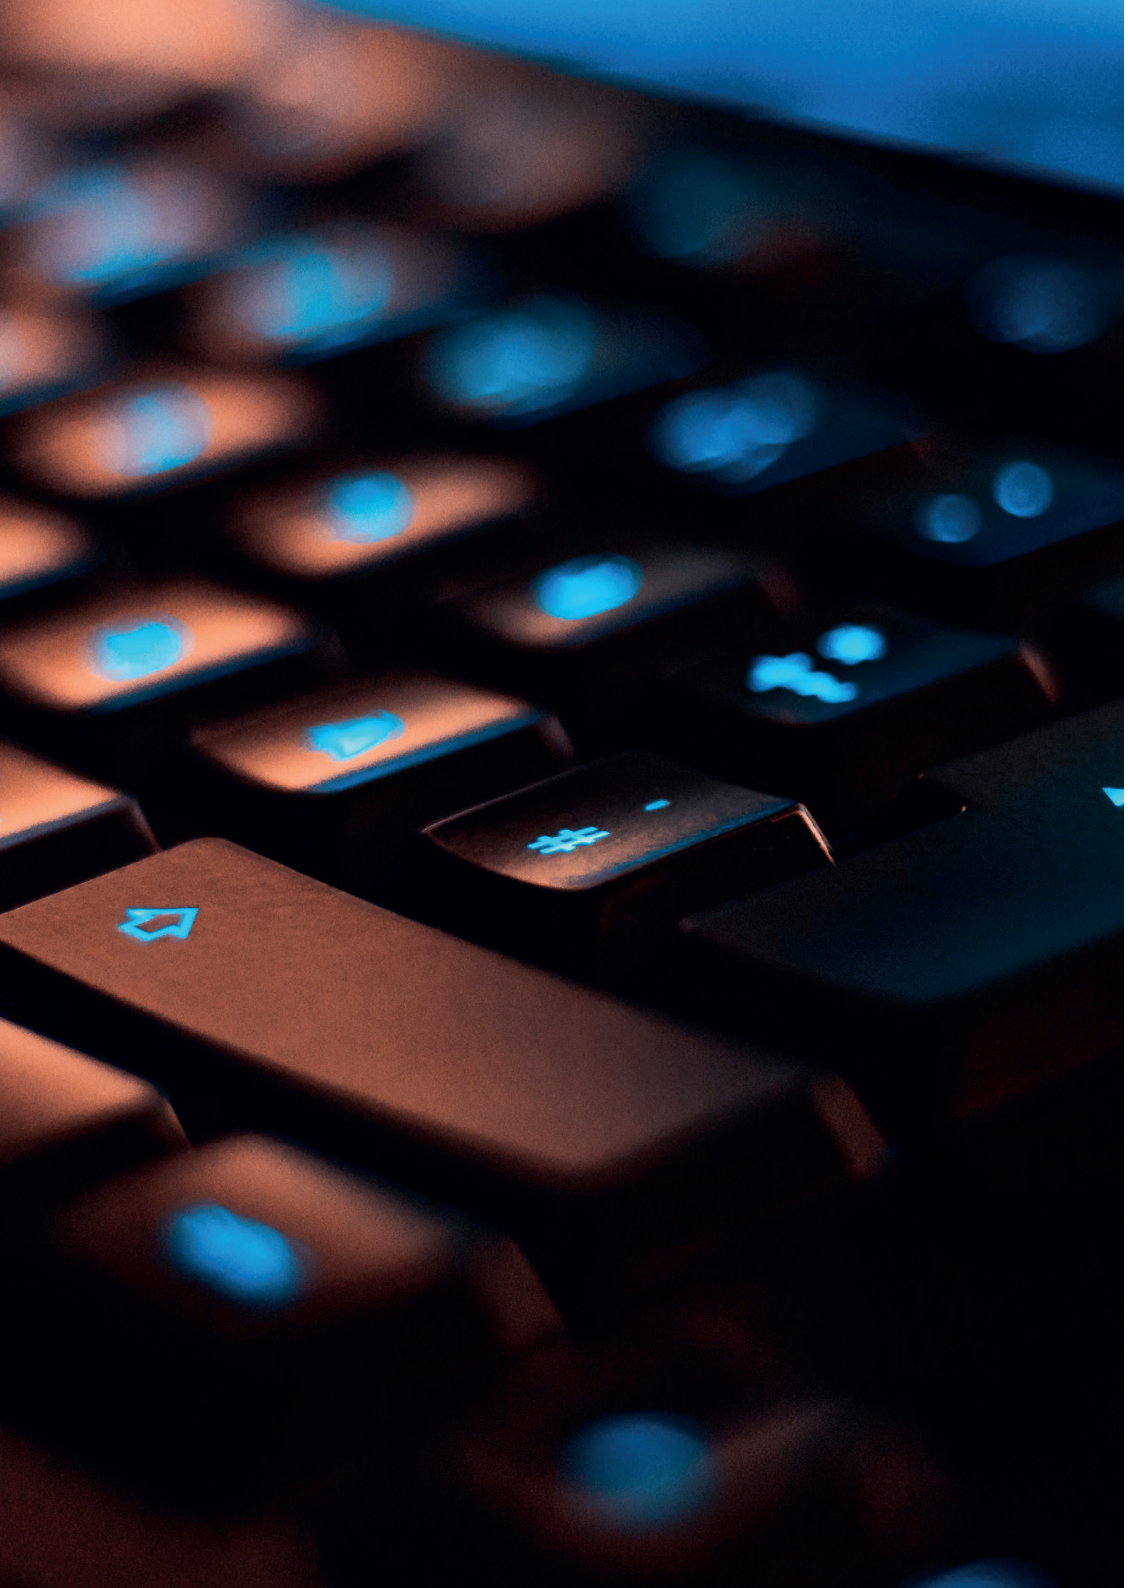
KEY BENEFITS

- End-to-end solution can be provided by YahClick Service Partners including YahClick Broadband connection, Peplink Balance hardware, delivery, installation, support, commissioning, and initial setup.
- Simple installation and commissioning.
- Quick to deploy and use.
- Simple to configure and troubleshoot.

YAHCLICK BACKUP SOLUTION

HOW DOES IT WORK?





YAHCLICK BACKUP SOLUTION IN ACTION

- Always-on, seamless connectivity with YahClick Backup Solution.
- YahClick High Speed broadband provides continuous connectivity in case of failure of primary terrestrial link.
- Ideal for critical communication sites such as key enterprise offices, remote projects and home locations, and stable offshore rigs.
