

SECURITY SOLUTIONS

BACKGROUND

Safety and security are fundamental necessities in remote areas. Yet, without a reliable, high-capacity internet connection, it is traditionally difficult - if not impossible - to implement.

Not anymore! YahClick Security Solutions, cutting-edge bundled security solutions, provide security-conscious communities in remote towns, farms, and other isolated areas, with reliable, optimised satellite bundled package that provides high-speed internet alongside a cloud-managed security platform.

Both our YahClick Security Solutions are designed to data-prioritise security infrastructure requirements, so that you can protect your business or home – no matter how remote your location is. Both options are able to operate during power outages, provided there is an approved UPS in place!

WHAT IS YAHCLICK SECURITY SOLUTIONS ?

We give you the peace of mind you've always imagined by offering you innovative security solutions that keep you safe, secure, and always connected through the comfort of your own phone. We do this through cutting-edge bundled security solutions, and provide you with reliable, optimized satellite internet, wherever you are. Whether you're in a remote town, your farm, or any area that might be considered as "remote".

Protect your home and secure your business with YahClick broadband packages combined with YahClick (powered by Hughes), and approved state-of-the-art security options designed to suit your needs and requirements.

OUR SOLUTIONS COME IN 2 OPTIONS

Photo Solution

Video Solution

HOW DOES IT WORK?

1. A SENSOR-BASED SOLUTION THAT CAPTURES PHOTOS AND SENDS THEM TO YOUR CELLPHONE

This is an ideal option for areas that experience regular power outages.

Whether you want to feel secure in your home or to secure your business, YahClick Security is your optimal solution.

Photo Solution is one of YahClick's bespoke security solutions that operate by packaging with Specific YahClick broadband packages with the best-in-class smart alarm system, Ajax.

Photo Solution operates via a central hardware hub, connecting four wireless security sensors to your internet package via a SIM card or Ethernet connection.

Ajax MotionCam detectors activate within 9 seconds after the system is alarmed. Should the sensors be set off, alarm verification alerts send a set of 3 photos to your cell phone via push notifications, SMS, or calls to the system owner.

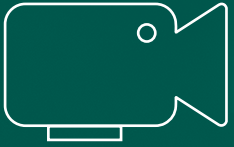

Photo Solution supports an open space distance between the hub and sensor detectors of up to 2000 meters. These sensors are pet-friendly and can be adjusted to ignore pets smaller than 50 cm and 20 kg in weight, the size of most household pets.

As the end user, you operate and manage the smart alarm system through the Ajax app, which works with both iOS and Android applications.

The system batteries can last up to 7 years and will even send an alert notification to inform you when the battery needs replacement.

YahClick SPs provide and install the alarm system hardware at a one-off, upfront cost and connect it to the YahClick Security Solutions Satellite Internet Subscription with Specific broadband Package.

2. A CAMERA-BASED SOLUTION THAT CAPTURES VIDEOS

Video solution is the second of YahClick's bespoke security solutions. It operates by packaging our specific broadband packages with the iconic video smart alarm system, UNV.

The video solution operates via a central hardware hub, connecting four, wired security smart cameras to your internet package via an Ethernet connection.

UNV Intelligent Network Cameras can be configured to trigger intrusion using Perimeter Setup, Cross Line Intrusion, and Enter and Leave Area Detection. Based on the configuration, smart intrusion prevention significantly reduces false alarms caused by leaves, birds, lights, etc., and only focuses on humans and vehicles.

As the end user, you operate and manage the smart alarm system through the EZView app, which works with both iOS and Android devices.

When an intrusion is detected, the NVR HUB will send a notification to your EZView app. You can then open the app and view the camera's live feed.

WHO CAN BENEFIT?

- Home users.
- Warehouse owners for automatic doors and roller shutters.
- Large factory and property owners for spotting trespassers.
- Any property, factory, home, or warehouse owners for intrusion detection and triggering an alarm.
- Apartment building security.
- Remote construction site owners for surveillance and remote security.

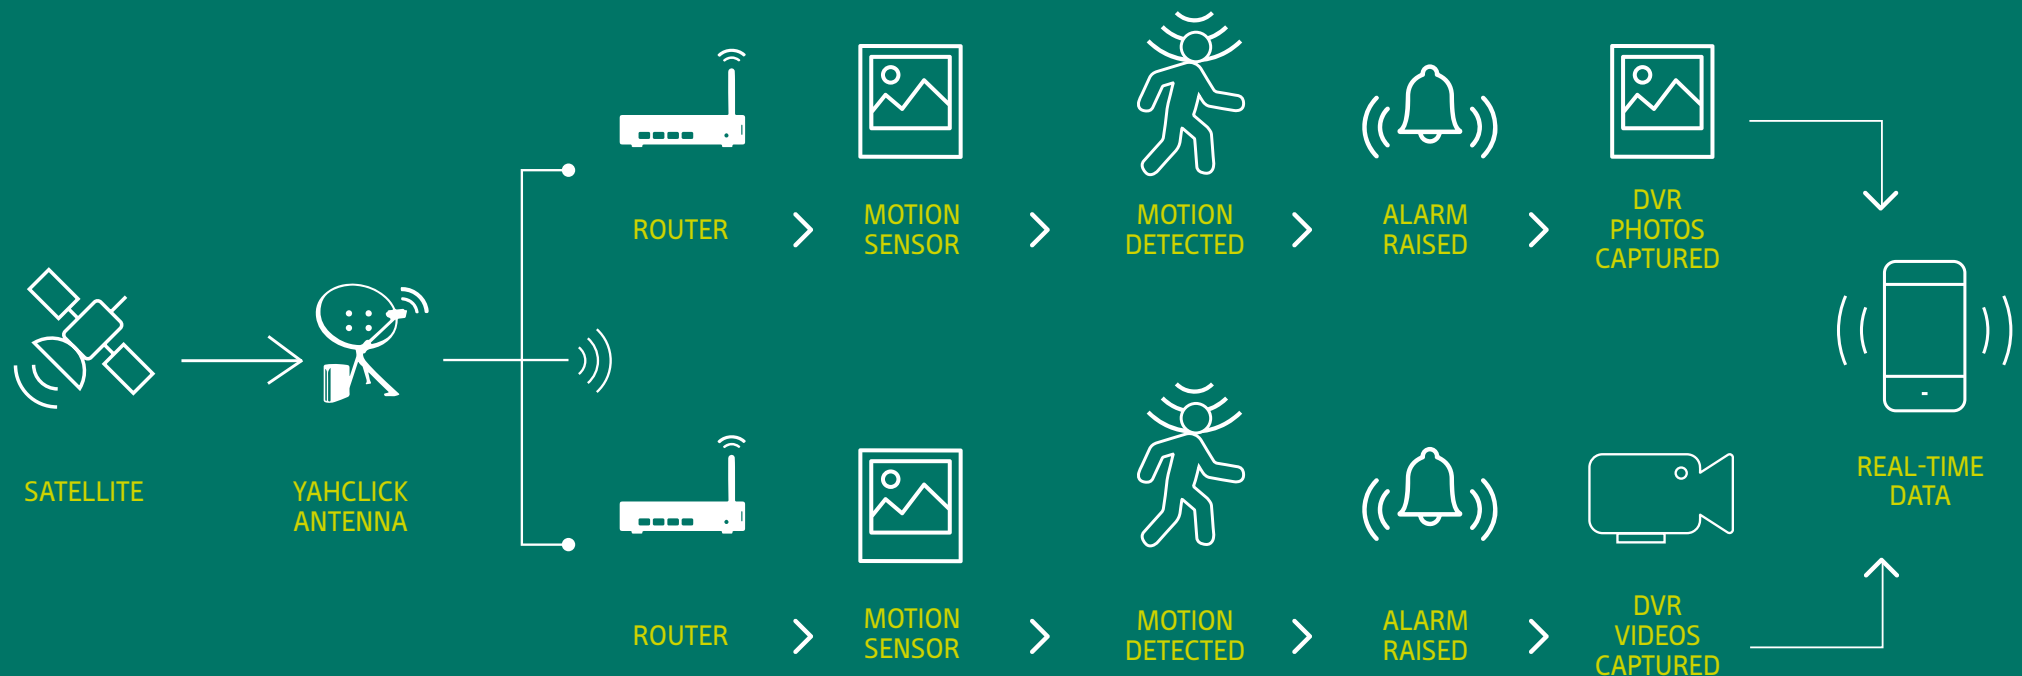

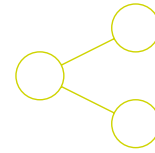

KEY BENEFITS

- Turnkey solution by YahClick that provides high speed satellite broadband bundled with Ajax security solution.
- Provide end-to-end connectivity. Setup, installation and training will be provided by YahClick SP.
- Ability to define customized packages based on end user requirement.

YAHCLICK SECURITY SOLUTIONS

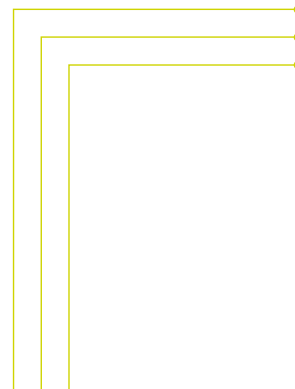

HOW DOES IT WORK?

YAHCLICK SECURITY SOLUTIONS IN ACTION

- Bundled Solution offering consisting of Turnkey solution, YahClick Satellite Broadband, and Ajax or UNV Security System
- Solution that offers an indoor security hub or a video recorder that connects to all sensors/cameras remotely.
- Very little maintenance needed, all sensors have batteries that can last up to 7 years.
- Security hub connects to the internet with LAN Ethernet cable and/or SIM card.
- Easy connection to the YahClick Security Solutions using their iOS or Android phone or tablet.
